Stannol Expands International Distribution Network with New Partners in Europe

Stannol continues to expand its international distribution network, thereby strengthening its presence across several European markets. With Candor Sweden AB, Cabel+ SRL and Grosvenor, the company has gained multiple new distribution partners for different regions. The aim of these collaborations is to provide customers in Europe with even better access to Stannol's soldering materials and process solutions.

Candor will be responsible for the markets in Denmark, Sweden, Finland and the Baltic region, including Latvia and Lithuania. Cabel+ will serve as the new distribution partner for Italy, while Grosvenor will cover North Macedonia, Serbia, Romania, and Ukraine.

Local Technical Consulting and Support

"By partnering with Candor, Cabel+ and Grosvenor, Stannol has gained experienced distribution partners with in-depth market knowledge and well-established networks in electronics manufacturing. All three companies are excellently positioned in their respective regions and, in addition to distribution, provide technical consulting and comprehensive support for customers in electronics production," emphasizes Thomas Kolossa, Head of Sales at Stannol.

As a result of these new partnerships, technical inquiries can be addressed more quickly and more precisely. This is particularly important for applications such as hand soldering, selective soldering, or the selection of suitable fluxes.

Expansion of International Market Presence

The regions covered represent important markets for the electronics industry. Numerous companies in sectors such as industrial electronics, telecommunications, automotive, and medical technology operate development and production sites there. By expanding its partner network, Stannol aims to further strengthen its international market presence and reliably supply customers worldwide with high-quality soldering materials.

STANNOL

PIONEERS OF SOLDERING

About Stannol GmbH & Co. KG

Stannol can look back on a long tradition in solder production: the company has been combining experience and progress in its products for over 140 years. To this day, Stannol is considered a pioneer of modern soldering technology and is firmly established on the market as a brand. The company specialises in the production of solder wires, solder pastes, fluxes as well as rod and bar solders. The product range also includes measuring and testing devices, cleaners, protective lacquers and other accessories. In addition to its high-quality standards, Stannol is committed to sustainable and ecological production.
